

## Save time and money

IntelliSuite allows big earnings at service and trouble shooting.

## Wireless security fog

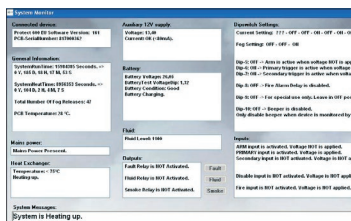

With IP connectivity and IntelliSuite you can connect to the fog cannon from your PC wherever you are in the world - and still use all the functionality of IntelliSuite.

IntelliConnector - the special cable for connection between computer and fog cannon.

IntelliBox is compatible with IntelliSuite. The box controls up to 16 fog cannon - cabled or wireless.

Example of the IntelliSuite user-interface. The vital data of the fog cannon is now accessible.

# IntelliSuite™

IntelliSuite is a diagnostic software product which can retrieve both real-time information and legacy data from the fog cannon. Using IntelliSuite you get high quality installations, more efficient and professional service & trouble shooting - and more satisfied customers!

## Features:

- IntelliSuite is a diagnostic software product for installer's toolbox
- Give the fog cannon - or more units in one installation - a health check
- Retrieve both real-time information and legacy data - in special cases, you can even upgrade the fog cannon's own software
- You can push a button in the IntelliSuite software and make a test release of the fog
- With your dealer login you can download the software for free on <http://downloadcenter.protectglobal.com>
- You connect the PC and the fog cannon with the IntelliConnector cable
- In case the fog installation is wired to the Internet (via IntelliBox IP or IPCard), IntelliSuite and the whole installation can be accessed remotely as if you were standing next to it

## Specifications:

### Current status:

Any faults and causes
Input and output condition (facilitates installation and troubleshooting)
Battery condition, fluid level and heating time
Information about the DIP switch setting used and its impact on Fog Cannon effect
Information about Fog Cannon software and version

### Reporting functions:

Complete report on the system, previous events and current status
If relevant, the report can be sent to PROTECT A/S - simply as an ordinary text file via email
Enables PROTECT A/S to provide much better assistance in connection with troubleshooting
The report forms a completely reliable basis for fault analysis, identification and troubleshooting
The report documents function or lack of function in connection with a burglary and may assist in reconstructing a chain of events and facilitating police investigation

### Option of upgrading fog cannon software:

If PROTECT A/S assesses that a software correction can solve a current problem, you can use the Flash Loader function to load new software into your fog cannon

PROTECT A/S can send new software to specific fog cannon units via email, enabling quick and simple updates, if required

In some cases, the Flash Loader function may substitute PCB replacement

Technical info: The IntelliConnector cable is galvanically isolated for several kV, thus ensuring the fog cannon as well as the connected PC against overvoltage and current faults. Minimum PC requirements: Microsoft Windows XP and one USB port.

We reserve the rights to modify due to misprint or changes in the technical data.
