

Reverse Fog Discharge: Shoot backwards

With a DIY kit it is possible to turn the fog output 180 degrees. This makes concealed installations and maintenance problem free. Of course, the extension piece also fits this solution.

Different positions - different nozzles

Scan the code with a smartphone to see how the four different nozzles work.

Contact technical hotline

We are stand by at the telingphones, ready to help you mount and optimising a fog cannon. Call us and ask for technical hotline.

Innovative security fog

The developers at PROTECT always work hard to make fog cannons and accessories better and smarter - beneficial to alarm installers and users. Many of PROTECT's products are made in close collaboration with alarm installation contractors.

Accessory: **Nozzle extension piece**

Increase the distance between the fog cannon and the actual security fog release. Designed for concealed installations when shooting from one room into another through a wall or a ceiling*.

Features:

- Designed for concealed installations
- For discrete installations through a wall (horizontal) or ceiling (vertical)*
- Makes it possible to increase the distance between the fog cannon and the nozzle

**WARNING: Lower temperature in the nozzle extension piece - both at vertical and horizontal installations - may cause it to drip*

Vertical installation

Specifications:

- Material: Isolated brass pipe surrounded by aluminum
- With thread in both ends to connect to the fog cannon and the nozzle
- Total length: 15 cm
- Compatible with fog cannon models PROTECT 600i/1100i/2200i
- Doing concealed installations always keep the front of the nozzle 2-4 cm above the ceiling/behind the wall
- The actual hole in the wall/ceiling should be no less than 4 cm

Horizontal installation
